

Step-By-Step Guide

The Metal Pedal is easy to set and use. Here's how:

1. Remove the arm bar from the staple.
2. Move the arm bar to the back of the trap so it hangs over the back of the trap.
3. Bait the trap with a high-protein substance, such as peanut butter, chocolate or hazelnut spread. Place the bait on the metal bait pedal using a Q-Tip, toothpick or another tool to mask your human scent.
4. Pull the kill bar back and hold it in place with your thumb.
5. Swing the arm bar over the kill bar and latch the bent end of the arm bar into the notch on the metal pedal as shown. Slowly release pressure from the kill bar until the arm bar has fully engaged and holds the kill bar securely.
6. Place the trap wherever you've seen signs of rodent activity or along the wall where rodents like to travel. The baited end of the trap should be placed flush against the wall.
7. After the mouse is caught, properly dispose of the dead rodent. The trap can either be discarded or reused.
