

Cleaning the Drip Tray

1. If the unit has a drain tube that leads into a bottle, empty the bottle and reinsert the bottle.

NOTE: Disregard this step if the drain tube is connected to a floor drain.

2. Lift the grate from the drip tray and clean it with warm water and soap.

3. While the grate is removed, clean the drip tray area using warm water and soap.
4. Run warm, soapy water through the drain line to clean.
5. Empty the drain bottle again (if applicable).
6. Dry any excess water from the drip tray.
7. Place the clean grate back on top of the drip tray when finished.
