

Customization

- **Will my logo work for laser-cutting?**

Laser-cutting works best on logos with simple, smooth shapes and text. Highly detailed logos may need simplification or be substituted with plain text

- **Can I customize the panel widths and pole heights?**

We make all the SelectSpace components in-house so we can modify the dimensions as a custom order. Please keep in mind that custom orders are going to be a higher cost and longer lead time than standard components.

- **Do you have any other panel patterns?**

Currently we are offering the circle pattern and square weave pattern. Additional patterns may be added in the future! If you have a specific pattern in mind and would like to discuss a custom order, reach out!

- **Can I get partitions that match my logo/color scheme?**

Sure! Powder coating comes in a wide variety of colors and can be custom-made to match a paint or fabric swatch. Please contact us including a plan view or drawing with dimensions and the color information. Using a standardized physical color numbering system such as RAL or Pantone works the best.

- **How long do custom orders take to ship?**

Laser-cutting and our standard color options take 2 weeks from order placement and/or logo approval. Very large orders and highly customized orders such as custom panel lengths, pole heights, or panel patterns may take 4-6 weeks from order placement.

- **What file types are acceptable?**

- Vector artwork is the easiest to work with!
- If you don't have an **.ai** or **.eps** logo file, then send us the highest resolution/largest file you have.
