Notes & Details

This AvaMix rinser is a perfect companion to any blender! Cleaning blender jars can be a time-consuming and difficult process, especially in fast-paced bars, coffee shops, and smoothie stations, even more so if you have a small sink or space constraints. This device makes cleaning blender jars quick and easy by blasting pressurized water upward into the blender jar for a quick rinse that cleans debris from all of the jar's hard-to-reach places, like the area around the blade assembly. The simple and easy to use push activation is engineered to prevent water from splashing up during use, and lets you quickly clean out jars and get them ready to use again in no time. Use it on other items like glasses and malt cups too, for added versatility!

Best of all, it's easy to set up, thanks to the adapter kit which allows it to install onto virtually any common faucet nozzle threads. It also attaches to the sink bottom with a pair of suction cup feet that prevent it from moving around during use.
