3/8" Water Connection

ETL Listed

Avantco Equipment

Technical Data

Color	Silver
Control Type	Digital
Features	Hot Water Faucet
Number of Warmers	3 Warmers
Output	4.76 Gallons per Hour
Plug Type	NEMA 5-15P
Power Type	Electric
Style	Single
Tank Capacity	1.5 Gallons
Type	Coffee Brewers
Water Inlet Size	3/8 Inches
Water Source	Direct Connection

Notes & Details

Ensure you always have hot coffee on hand to serve your guests with this Avantco automatic coffee maker! Designed for easy use, this coffee brewer features three lower decanter warmers that keep your coffee at the optimal serving temperature after brewing. Its compact design occupies minimal countertop space, saving you room for other necessities. Ideal for restaurants, cafes, and other heavy-duty applications, this coffee maker brews directly into the decanter (sold separately), making it the perfect solution for your business or facility. It brews up to 4.76 gallons per hour between 170 and 260 degrees Fahrenheit. Plus, users can easily set it up to brew by time or by volume for added convenience.

This brewer utilizes an easy-to-use digital display that allows you to easily reprogram the machine to your chosen parameters, and with independent controls for warming and brewing, you can easily set this coffee machine to fit your needs. Its rugged stainless steel funnel is more durable and longer-lasting when compared to plastic funnels. Plus, its external stainless steel construction gives it a sleek appearance and makes it easy to clean and sanitize to prevent stickiness.

This innovative coffee maker is designed with a hot water faucet, allowing you to easily dispense hot water for tea, cocoa, and other hot beverages. The safety cutoff sensor ensures that you never exceed the maximum water or temperature levels, providing peace of mind during busy service hours. Additionally, the programmable energy saver mode reduces the tank temperature during idle periods, helping you save energy and reduce operational costs. For automatic operation, it connects to a 3/8" rear-mounted water line that fills the reservoir, eliminating the need to constantly refill. This unit requires a 120V electrical connection for operation.
