Number of Fry Pots	1 Fry Pot
Plug Type	NEMA 5-15P
Power Type	Electric
Temperature Range	120 - 390 Degrees F
Type	Electric Countertop Fryers

Notes & Details

Fry up a variety of different food items with this convenient Avantco F100 10 lb. electric countertop fryer! Built to out-perform all others in its class, this 10 lb. fryer is perfect for light-duty applications like delis, small sandwich shops, and concession stands. The compact size allows you to tuck it into any corner on the counter, and the heavy-duty stainless steel construction adds extended durability. Thanks to the thermostatic controls, you can adjust the temperature of the oil to from 120-390 degrees Fahrenheit to accommodate the appropriate frying temperatures for different foods.

To ensure safety for you and your employees, the fryer features a minimum and maximum oil fill line. The heavy-duty fryer basket features a black coated handle for heat protection and operator comfort. After you've finished frying your food, simply hang the basket on the hanger to let any remaining oil drain out. It also serves as a great tool for cooling your freshly fried products while you focus on other kitchen tasks. To expedite the cleaning process at the end of the night, the components lift out of the fryer easily. A crumb screen rests on the bottom of the tank and catches excess crumbs so they don't burn and create a mess, and can be disposed of by simply lifting the screen up and discarding the debris. The included night cover helps protect your unit from airborne contaminants during off hours. The Avantco single countertop fryer requires a 120V electrical connection.

This unit is not designed for constant, heavy use.
