Type	Holding / Proofing Cabinets

Notes & Details

Proof dough and keep hot food hot with this Avantco undercounter insulated holding / proofing cabinet! This compact, versatile unit is great for keeping hot foods at the perfect temperature to serve at a moment's notice! With a proofing mode and adjustable humidity settings, you can also proof dough before it's ready to bake. In heat mode, this model operates between 80 and 185 degrees Fahrenheit; in proof mode, it operates between 85 and 115 degrees Fahrenheit at 30-100% humidity.

With humidity levels adjustable from 30% to 100% and 9 different temperature settings, you'll be able to accomplish the right results every time! A simple toggle switch lets you select between the "heat" and "proof" modes, while the vibrant LED temperature display makes it easy to keep an eye on things from across the room. A pair of dials is located on the unit's bottom control drawer that can also be removed for quick cleaning. The rugged aluminum interior contains fixed lip-load pan slides set on 1 1/2" increments. You can place up to 11 full size sheet pans on whichever level is convenient. To use the proofing mode, simply fill the pan with water, select the proofing mode, and then select your desired humidity level! The solid door provides outstanding impact and heat resistance. Plus, a tight-fitting gasket keeps the door closed when it's supposed to be and keeps the hot air in!

At just 30 5/8" tall, it's easy to roll this unit under a counter or work table! This cabinet has 5" poly casters with locks on the front wheels to keep it in place once you've rolled it right where you want it. Built-in corner bumpers protect your walls from scuffs and bumps while you're rolling from one area to another. An integrated cord wrap on the back will keep the power cord off the floor and out of the way while you roll the cabinet. You can also reverse the door hinges based on your needs. It has an output of 1,575W and requires a 120V electrical connection.
