Notes & Details

Maximize your pasta output with this Avantco PC101 countertop single-tank electric pasta cooker. This unit has what it takes to prepare a multitude of pasta and noodle styles simultaneously with its 2 single-serving baskets. The baskets sit in a removable 1 gallon / 4 liter water tank that is incredibly easy to clean! You can also add versatility with the removable cutout lid to transition into rectangle baskets (sold separately). A simple thermostatic knob controls the temperature of the heating element up to 230 degrees Fahrenheit and will prevent water from getting too hot or not hot enough with the help of its red indicator light.

The sides of the unit each have a built in handle for easy transportation. Constructed from stainless steel, this unit is designed to live up to your commercial kitchen needs. Four support legs each with non-slip feet will ensure there is no unwanted sliding during operation. This pasta cooker requires a 120V electrical connection for operation.
