Plug Type	NEMA 5-15P
Type	Potato Peelers

Notes & Details

Peel potatoes with ease and efficiency using this Avantco PPC22 22 lb. countertop potato peeler. Designed to peel 22 lb. of potatoes in 5 minutes, this peeler features an easy to load hopper and abrasive metallic disc for thorough peeling. Ideal for high-volume establishments looking to add potatoes, soups, and stews to their menu without extensive prep time, this peeler is also perfect for use in healthcare facilities and schools. The clear lid allows staff to monitor progress during the cycle without risking injury or mess by opening the lid. For added safety, the unit will not operate the abrasive disc unless the lid is closed. This peeler has an on/off button, a pulse button, and a 5 minute timer to set the operating cycle.

The peeler sits on your countertop, keeping it at a comfortable working height for staff. Equipped with a single phase, 1 hp motor this sturdy countertop peeler can also peel garlic and carrots. It includes a 3/4" hose and easy-to-use ball valve to add water to assist in the peeling process. A drain hose on the bottom of the unit removes waste water allowing it to be released into a floor drain or bucket. The large door on the chute also has a handle so it can be lifted away to release the potatoes once peeling is complete. This unit requires a 120V electrical connection for operation.
