Liner Material	Anodized Aluminum
Maximum Temperature	212 Degrees F
Number of Compartments	1 Compartment
Plug Type	NEMA 5-15P
Shape	Round
Temperature Settings	Infinite
Type	Warmers

Notes & Details

This Avantco S30RD 11 Qt. red soup kettle warmer is an excellent addition to any restaurant, catering service, or buffet line that needs to hold soup, gravies, stews, or nacho cheese at food-safe serving temperatures. Its simple manual control knob allows you to hold product at temperatures from 100-212 degrees Fahrenheit, while its stainless steel construction with bold red coloring is durable, attractive, and a breeze to clean.

The lid's cool-touch handle and hinged design provide safe handling while eliminating the potential risk and mess associated with holding a lid or setting it elsewhere while serving. While the thermostatic control dial makes it easy to control the heat inside the kettle, it also features a notch so you don't need a separate space to keep the ladle when not in use. Just leave it in the warmer, and the lid closes around it, trapping the heat inside!

The removable hinged lid, ring, stainless steel inset, and anodized aluminum inner liner help to make cleaning as easy as possible and ensure long-lasting durability. The included two sets of magnetic labels for some of the most popular soups and stews means no more lost or broken tabletop signs.
