Notes & Details

For an industrial popcorn popper that can quickly produce bucket after bucket of fresh, buttery popcorn for hungry customers, look to the Carnival King PM30R Royalty Series 8 oz. popper! Standing at 30" tall and featuring 1320W of power, this machine will keep hot popcorn flowing as quickly as your customers can eat it up!

This high-powered machine has an 8 oz. stainless steel kettle that only needs a few minutes to warm up, an ideal feature for high-volume businesses. Once this Carnival King PM30R unit is cooking, the hot, finished popcorn falls to the popper's warm deck, which can hold up to 85 oz. of popcorn, where it's kept fresh until you're ready to serve. The included scoop and measuring cup set help ensure consistent portion sizes every time. This unit will catch the eye of passing customers with its LED light, which brightly illuminates the finished popcorn for excellent merchandising.

Cleanup is just as simple as the popping process because this stainless steel kettle is removable for easy cleaning and maintenance. Each component of the Carnival King PM30R is designed to ensure long-lasting use. The front, back, and side see-through clear panels that make up the viewing area are all made of heavy-duty plastic, while the crumb tray, kettle, and interior top / bottom are made of stainless steel. Plus the traditional old maid style stainless steel crumb tray is removable for fast, easy cleanup. It also features a non-stick interior coating to make cleaning easier. The unit's red frame is stainless steel as well, while the top is constructed of powder-coated steel for impressive durability.

A safety circuit breaker is also included to prevent motor burnout. It comes standard with rubber feet to prevent scuff marks and provide stability. Operation is quite simple, as there are just three switches to control the whole unit! This popper requires a 120V electrical connection.
