

MINI-FLUTED TUBE CAKE PAN

CHICAGO METALLIC ITEM #43055

BUNDY

Chicago
Metallic

Chicago Metallic's **Mini-Fluted Tube Cake Pan** provides bakers with a unique solution for meeting current demands for smaller portion sizes and single-serve desserts. Smaller mini-size baked goods not only allow bakers to provide high quality products at lower price points, they also often have higher profit margins.

BAKING CHALLENGES

Creating unique baked goods that inspire impulse or special occasion purchases can add significant revenue to any baking business. Identifying and developing products to capitalize on this opportunity can be difficult without the right bakeware partner.

BAKING SOLUTIONS

Perfect Shape – Chicago Metallic's unique individually fluted tube cake shape has been engineered to eliminate narrow flutes and improve cleaning and release. The center tube is also fluted.

Perfect Size – Each of the pan's 15 moulds produces a fluted tube cake that is about four inches in diameter and about 1 3/4" tall, depending on formulation and portioning. The overall size of this commercial weight aluminized steel cake pan is approximately 18" x 26", which means it will fit in most commercial or rack ovens.

Perfect Coating – The Mini-Fluted Tube Cake Pan comes coated with Chicago Metallic's proprietary AMERICOAT® Plus Silicone Glaze which has been documented to provide over 600 bakes without the aid of pan oil and improves sanitation procedures.
