Material	Cloth Metal
Type	Filter Bags Oil Filter Frames

Features

- Holds filter bag in place for easy filtering
- Makes skimming used oil incredibly easy
- Filter bag attaches to the holder with snaps
- Holder features a durable stainless steel construction
- Promotes clean oil for better food quality

Notes & Details

This Fryclone oil filter bag holder frame with filter bag is a great way to make sure that your deep fryer's oil is always clean and free of debris chunks that can degrade its quality over time. Simply attach the included filter bag to the frame, and you're ready to begin filtering. The snaps attach to the frame to securely hold the filter bag in place, allowing you to pour the oil through without any mess! The holder features a versatile design that can be used as a skimmer, or you can place it over an oil pail and pour directly over the bag. The all-metal construction makes it easy to clean when you're done, while the rubber components on the grip and end hooks provide added comfort and protection.

The 6" deep filter bag easily attaches to and detaches from the holder frame with a series of snaps, so you can get set up and start skimming within seconds. After several uses, the bag can be rinsed with hot water before re-use. This ensures it's ready to go right when it's needed. With this filter holder kit, your fryer oil is sure to last longer and taste great!
