Patty Diameter	4 Inches
Features	Hand Wash Only
Installation Type	Countertop
Material	Plastic
Patty Thickness	1 Inch

Technical Data	
Style	Manual
Thickness	1 Inch
Type	Hamburger Press

Notes & Details

Make up to 180 fresh burger patties per hour with this Garde XL burger press! This model comes with a mold that makes consistent burger patties 4" in diameter and 1" in thickness, so you can be sure that each burger is the same size for consistent cooking and a great customer experience. Should you ever wish to change your menu, other mold sizes are available (sold separately) to convert your burger press to a 2" or 5" patty diameter.

This patty molding machine dramatically reduces labor and prep time so you can offer freshly-made burgers to your customers without spending the additional time to form them by hand. Because this model uses a hopper to hold a supply of burger ingredients, it can produce as many as 9 presses from a single loading. This means you don't need to load individual portions of meat mixture before pressing each patty - no weighing or portioning needed!

This patty molding machine can keep up with your business's recipes and volume requirements. When you are finished making burger patties for the day, the unit is simple to disassemble for convenient cleaning.
