## Notes & Details

Create an attractive seating area in your restaurant, hotel, or bar with this Lancaster Table & Seating cast iron 22" standard height table base with table equalizers. This 22" table base comes with a round base plate, column, spider, leveling feet, and base screws to hold everything together. These components feature a black, powder-coated finish that promotes a professional appearance and matches any colored table top. The base plate and spider are made of heavy cast iron to ensure that your table has a perfectly stable base, while the standard height column is made of painted steel to support the heavy weight of table tops.

This table base is easy to put together and provides your guests with stability and comfort once assembled. The base plate includes pre-drilled holes, making it easy to insert glides to prevent your floors from being scratched, and the 3" standard height column comes with a rod, washers, and a nut to secure the column to your existing base plate and table top for additional stability. The 10" spider can easily be installed between the column and table tops, and the included 1" #10 panhead screws are used to attach a table top to the table base, so you have all the components you need to create an attractive and functional table.

This table base also comes with an innovative 4-pack of FLAT Tech Equalizer 1/4"-20 thread black table levelers to keep your table tops flat and level. This leveler adjusts up to 1/4" in height and locks in place to stabilize each table, ensuring an ideal, professional dining experience in your establishment. It can also be used to align tables together. Simply tilt or lift a table top in the direction of an adjoining top. The feet will adjust to create a perfectly aligned surface, making it great for large parties that require multiple tables to be pushed together. The Equalizer is made of reinforced plastic that houses a 1/4"-20 stainless steel thread, allowing it to be installed onto most table bases with existing screw-in feet. The thread compresses into the foot and automatically activates the hydraulic stabilization technology within. It's sure to help prevent customer complaints and accidental spills that may be caused by uneven table surfaces. Exceeding international standards for stability, strength, durability, and safety, this table leveler creates a more enjoyable dining area for your guests. Additionally, it is impact- and corrosion-resistant, guaranteeing use for years to come. To install, simply remove the existing feet from your table base and replace them with Equalizers. With this table base, it's easy to assemble professional-looking tables to complement your decor and seat your guests in perfect comfort.
