Type	Table Bases
Usage	Indoor

Notes & Details

Create an attractive seating area in your restaurant, hotel, or bar with this Lancaster Table & Seating cast iron 22" bar height table base with self-leveling feet. This 22" table base comes with a round base plate, column, spider, leveling feet, and base screws to hold everything together. These components feature a black, powder-coated finish that promotes a professional appearance and matches any colored table top. The base plate and spider are made of heavy cast iron to ensure that your table has a perfectly stable base, while the bar height column is made of painted steel to support the heavy weight of table tops.

This table base is easy to put together and provides your guests with stability and comfort once assembled. The base plate includes pre-drilled holes, making it easy to insert glides to prevent your floors from being scratched, and the 4 1/2" bar height column comes with a rod, washers, and a nut to secure the column to your existing base plate and table top for additional stability. The 18" spider can easily be installed between the column and table tops, and the included 1" #10 panhead screws are used to attach a table top to the table base, so you have all the components you need to create an attractive and functional table.

For added stability, this table base includes 1/4" self adjusting table feet to add to your table legs. With these, you don't have to worry because each foot will independently adjust up to 1/4" to account for uneven floors. They feature a 1/4"-20 thread, so that you can install them by screwing them into the table legs. With this table base, it's easy to assemble professional-looking tables to complement your decor and seat your guests in perfect comfort.

Assembly required.
