Base Style	End (T-Shape)
Color	Black
Features	Self-Leveling
Finish	Powder-Coated
Type	Table Bases

Technical Data	
Material	Cast Iron Steel
Usage	Indoor

Notes & Details

Whether you're just opening your first restaurant or are looking to replace the old tables in your bar, we've got the perfect product for you. With the Lancaster Table & Seating cast iron 5" x 22" black 4 1/2" bar height end column table base, you can create a comfortable dining area for customers in your establishment!

A heavy duty, cast iron, cross shaped base offers durability and stability to your table. It also includes (4) self-leveling feet. These levelers help keep tables secure and balanced when placed onto irregular or uneven floors. They can accommodate up to a 1/4" variance in the level of floors and lock into place for superior stabilization. They are also helpful in cases where you wish to align multiple tables together, by eliminating any height gap from one table to the next. All of these elements combine for fewer customer complaints and accidental spills caused by a wobbly table.

The base column is made of durable steel to support the heavy weight of table tops and their contents. It measures at 4 1/2" in diameter with a threaded interior rod that easily affixes to the spider plate. The spider is made of a heavy cast iron with 8 pre-drilled holes for the included pan head screws to secure the column to the tabletop. This base is able to hold up to a 30" x 60" tabletop or up to a 36" round or square tabletop (sold separately) when paired with a second base. It is finished with an attractive black powder coat for a sleek, professional appearance.
