Notes & Details

This stainless steel Regency dipper well bowl has a 5 5/8" opening to easily hold flatware, ice cream scoops, and more without obstructing water flow! A dipper well is an essential part of an ice cream shop or snack bar. Keeping your dipper well in good condition is important in order to keep it working like it should. If your dipper well bowl is broken, dented, or corroded, this bowl is a great choice to replace it.

The included inner bowl and 4 1/4" long brass pipe allow this unit to handle overflow and drainage with ease. Since it is made to sit in an existing counter, only the rim will show for a sleek and professional look. When you are ready to install this dipper well bowl, it requires a 6" cutout in the counter.
