Notes & Details

Prepare drinks with increased efficiency and ease thanks to the Regency stainless steel drop-in water station. A 10 7/8" deep insulated ice bin features a 23 lb. capacity to accommodate busy restaurant beverage stations or bars, and an integrated rubber thermal breaker works to reduce condensation. A drip pan with a removable grate helps to contain spills and drips for a safer, cleaner environment.

This standard-duty unit is designed for years of long-lasting use with the help of its 20 gauge fully stainless steel construction. A sliding stainless steel ice bin cover is also included to prevent contaminants from coming into contact with your ice. Extruded black polyethylene molding with a thermal breaker marine edge adds extra durability. The unit has (2) 1" IPS brass drains, one each for the ice bin and the drip pan. Glass filler is sold separately.
