Notes & Details

Prepare drinks with increased efficiency and ease thanks to the Regency stainless steel drop-in water station. A 10 7/8" deep insulated ice bin features a 23 lb. capacity to accommodate busy restaurant beverage stations or bars, and an integrated rubber thermal breaker works to reduce condensation. A drip pan with a removable grate helps to contain spills and drips for a safer, cleaner environment.

This standard-duty unit is designed for years of long-lasting use with the help of its 20 gauge fully stainless steel construction. A sliding stainless steel ice bin cover is also included to prevent contaminants from coming into contact with your ice. Extruded black polyethylene molding with a thermal breaker marine edge adds extra durability. The unit has (2) 1" IPS brass drains, one each for the ice bin and the drip pan.

The included glass filler is the perfect solution when you need a dedicated area for filling cups with fresh, clean drinking water! An intuitive and familiar lever design makes it easy to use, too - just push the cup back against the lever, and it will dispense from the nozzle. Providing 8" of clearance, it boasts plenty of room to accommodate all kinds of glassware, while its deck-mounted design and single-hole base make it easy to install. It installs using a 1/2" NPT male inlet.
