Notes & Details

Maintain the optimal temperature and quality of your food with this ServIt CC2UFNCF half size uninsulated holding and proofing cabinet with clear door! This cabinet is designed to keep all your freshly cooked food items hot until you're ready to serve. Plus, with a proofing mode and adjustable humidity settings, you can proof dough before it's ready to bake. This cabinet boasts a crystal-clear door with a polycarbonate window, allowing you to see the contents of the cabinet without opening it. This ensures that the heat will continue to circulate around the food, rather than escaping into the kitchen. Its durable, polymer construction protects it from any dents, impacts, or stains that may occur in medium-volume businesses. This cabinet contains three separate modules, which provide you with the convenience of having one cabinet that alternates between heated holding mode, proofing mode, and heated holding and proofing mode, saving you time, energy, and kitchen space.

For optimal use, this cabinet features three easily-accessible modules that each contain a digital thermometer, recessed control dials, a master on / off switch, and power indicator lights. For heated holding and proofing, the combination module allows you to maintain both humidity and temperature and includes individual analog controls to keep your food from drying out. If you'd like to use the cabinet just for holding, you can effortlessly switch to the holding module, which is designed to maintain the freshness of your food while it's waiting to be served. This module includes an analog control dial for temperature and a passive humidity generation system. If you're looking to proof dough, another flip of the switch converts the cabinet to the proofing module. This module is designed for proofing applications and includes analog controls that maintain temperature and humidity levels, ensuring that your dough has the perfect rise. All three modules can easily be removed for cleaning without the use of tools for added convenience.

This cabinet features solid, aluminum construction for superior strength and durability in even the harshest commercial settings. The interior heater holds your prepared foods at temperatures ranging from 80 to 200 degrees Fahrenheit, and with 2000W of proofing capability, this cabinet allows your standard yeast dough to rise with a relative humidity of up to 95 percent. A one-piece, double-hinged door swings out 180 degrees for optimal convenience during loading and unloading. Four plate-mounted swivel casters with two brakes provide additional mobility and stability. As for functionality, this cabinet's universal slides are fully adjustable on 1 1/2" increments and can accommodate up to 8 full size sheet pans and 16 full size steam pans. The slides also allow pans to be bottom loaded, so there's no interference if the top is covered with foil. This holding / proofing cabinet is ideal for commercial kitchens and off-site catered events. A 120V electrical connection is required.
