Notes & Details

Keep take-out and delivery orders hot and ready to enjoy with this ServIt heated shelf warmer / take-out station! This warmer features shelves with built-in temperature control to provide optimal conditions for your take-out and delivery orders. With 2 shelves, the warmer lets you organize orders so they're easy to find when customers or delivery services are ready to pick up their food. Plus, it's a pass-through unit, so food can easily be loaded from one side and retrieved from the other! Rope type elements gently and evenly heat the shelves between 80 and 200 degrees Fahrenheit.

This unit is designed for ease of use with thermostatic, digital temperature controls. The controls are simple to use and allow you to customize the temperature of each shelf on the unit, or individually turn them off entirely to accommodate both hot and ambient food. The marine edge on the shelves prevents food from slipping off the shelf, ensuring that your food stays where it belongs. The end panels (sold separately) work together with ServIt optional accessories such as the door set (sold separately) to improve this unit's warming efficiency. The optional divider panel (sold separately) is sure to enhance functionality and versatility in your take-out station.

This warmer is made to stand up to a commercial environment with a durable design that's built to last. The shelves are made with heavy-duty, 18 gauge, type 304 stainless steel while the posts are constructed with 16 gauge, type 304 stainless steel. This unit comes with adjustable flange, bolt-down feet for added stability and safety. This unit requires a 120V, 700W electrical connection for operation.
