

FULL CHAFER PAN CATERING/DELIVERY BAG

Maintains mandated temp for hours

SPECIFICATIONS:

Full Chafer Pan Catering/Delivery Bag

15" x 24" x 17"

This design was created to offer a lightweight, soft-sided option for holding different sized chafing pans and keep the food at the proper temperature. The two side and rear walls have a removable grid reinforcement that offers structure during use. When not in use, you can remove the rigid pieces and lay them inside the bag, prior to collapsing the bag for more efficient storage. This product comes with an accordion-style shelving system that accommodates any pan size from 2" to 6" in height. To maintain food temperatures, it is recommended that the Vesture Electric LavaPac Heating Element be used, which can be placed anywhere inside the bag or between the food pans. The Electric LavaPac power cord can be routed through the rear Velcro port and any excess cord can be stored using the Velcro fastener. The vapor-lock zipper prevents heat loss and the dual-purpose nylon handle is key for ease of use for lighter to heavier food loads.
