Notes & Details

This Waterloo wall mounted push back glass filler with 3/8" NPT male inlet is the perfect solution when you need a dedicated area for filling cups with fresh, clean drinking water. It is equipped with a self-closing lever and a volume control outlet to control the amount of water that is dispensed and save water in high-volume businesses. With a dedicated glass filler, you can also give your waitstaff more flexibility by placing it in the most convenient location for your workflow.

An intuitive and familiar lever design makes it easy to use, too - just push the cup back against the lever and it will dispense from the nozzle. It's a great way to improve workflow and ensure all of your customers get a glass of clean, refreshing water. The wall-mounted design and the 3/8" NPT male inlet make it easy to install.
